Summary of ECG Report

Based on the ECG report for Zubin Noshir Lakdawalla, here are the key findings and what they might indicate:

Heart Rate (VR): 64 bpm

This is within the normal resting heart rate range for adults (60-100 bpm).

QRS Duration (QRSD): 102 ms

This is slightly prolonged (normal is less than 120ms), possibly indicating a delay in ventricular depolarization. Further investigation may be needed depending on clinical presentation.

QT Interval (QT): 376 ms

This is within the normal range for men (generally less than 450 ms), indicating normal ventricular repolarization.

Corrected QT Interval (QTcB): 388 ms

This is also within the normal range, which is important for assessing the risk of arrhythmias.

PR Interval (PRI): 164 ms

This is within the normal range (120-200 ms), indicating normal atrioventricular conduction.

P-R-T Angles: 52° NA 48°

These angles provide information about the electrical axis of the heart. The values here are within normal limits.

Summary:

The ECG report shows normal findings.
