

Age / Gender: 60/Female
Patient ID: 1316262
Patient Name: Parvin H Titina

Date and Time: 6th Jan 25 10:40 AM

AR: NA

VR: 90bpm

QRSD: 100ms

QT: 364ms

QTcB: 444ms

PRI: 148ms

P-R-T: 57° NA 56°

The ECG report shows mostly normal findings with a few slightly prolonged intervals warranting monitoring.

Patient ID: 1316262

Patient Name: Parvin H Titina

Age / Gender: 60/Female

Date: 6th Jan 25 10:40 AM

Summary of ECG Report

Based on the ECG report for Parvin H Titina, here are the key findings and what they might indicate:

Heart Rate (VR): 90 bpm

This is within the normal resting heart rate range for adults (60-100 bpm).

QRS Duration (QRSD): 100 ms

This is slightly prolonged (normal is less than 120ms), possibly indicating a delay in ventricular depolarization. Further investigation may be needed.

QT Interval (QT): 364 ms

This is within the normal range for women (generally less than 440ms), indicating normal ventricular repolarization.

Corrected QT Interval (QTcB): 444 ms

This is at the upper limit of the normal range. While generally considered within normal limits, it's important to consider this in the context of other factors and potentially warrants monitoring, especially regarding arrhythmia risk.

PR Interval (PRI): 148 ms

This is within the normal range (120-200 ms), indicating normal atrioventricular conduction.

P-R-T Angles: 57° NA 56°

These angles provide information about the electrical axis of the heart. The values here are within normal limits.

Summary:

The ECG report shows mostly normal findings with a few slightly prolonged intervals warranting monitoring.
