

Age / Gender: 81/Male
Patient ID: 1319395
Patient Name: Ajaykumar Lall

Date and Time: 4th Jan 25 12:03 PM

AR: NA

VR: 57bpm

QRSD: 102ms

QT: 390ms

QTcB: 380ms

PRI: 164ms

P-R-T: 48° NA 32°

Patient ID: 1319395

Patient Name: Ajaykumar Lall

Age / Gender: 81/Male

Date: 4th Jan 25 12:03 PM

Summary of ECG Report

Based on the ECG report for Ajaykumar Lall, here are the key findings and what they might indicate:

Heart Rate (VR): 57 bpm

This is within the lower limit of the normal resting heart rate range for adults (60-100 bpm). A slightly low heart rate can be normal for some individuals, but it could also indicate bradycardia, which should be evaluated considering the patient's overall health.

QRS Duration (QRSD): 102 ms

This is slightly prolonged (normal is less than 120 ms), suggesting a possible delay in ventricular depolarization. While still within the broad range of normal, further investigation might be warranted depending on other clinical findings.

QT Interval (QT): 390 ms

This falls within the acceptable range for men, indicating normal ventricular repolarization. More precise assessment needs to consider age and other factors.

Corrected QT Interval (QTcB): 380 ms

This is also within the normal range, reducing concerns about arrhythmia risk.

PR Interval (PRI): 164 ms

This is within the normal range (120-200 ms), indicating normal atrioventricular conduction.

P-R-T Angles: 48° NA 32°

These angles represent the heart's electrical axis. The values are within the normal range.

Summary:

The ECG report for Ajaykumar Lall shows mostly normal findings. The slightly prolonged QRS duration warrants further attention in conjunction with the patient's medical history and other diagnostic tests. The slightly low heart rate should also be considered within the context of his overall health. A qualified physician should interpret these findings in light of the patient's clinical presentation.
