

**Patient ID:** 1319395

**Patient Name:** Ajaykumar Lall

**Age / Gender:** 81/Male

**Date:** 4th Jan 25 12:03 PM

### Summary of ECG Report

Based on the ECG report for Ajaykumar Lall, here are the key findings and what they might indicate:

**Heart Rate (VR):** 57 bpm

This is within the lower end of the normal resting heart rate range for adults (60-100 bpm). A slightly lower heart rate is often not a cause for concern, but can sometimes indicate underlying conditions.

**QRS Duration (QRSD):** 102 ms

This is slightly prolonged (less than 120ms is considered normal), possibly indicating a delay in ventricular depolarization. Further investigation might be needed.

**QT Interval (QT):** 390 ms

This is within the normal range for men (generally less than 450ms), indicating normal ventricular repolarization.

**Corrected QT Interval (QTcB):** 380 ms

This is within the normal range, which is important for assessing the risk of arrhythmias.

**PR Interval (PRI):** 164 ms

This is within the normal range (120-200 ms), indicating normal atrioventricular conduction.

**P-R-T Angles:** 48° NA 32°

These angles provide information about the electrical axis of the heart. The values here are within normal limits.

**Summary:**

The ECG report shows normal findings.
