

Age / Gender: 60/Female
Patient ID: 1316262
Patient Name: Parvin H Titina

Date and Time: 6th Jan 25 10:40 AM

AR: NA

VR: 90bpm

QRSD: 100ms

QT: 364ms

QTcB: 444ms

PRI: 148ms

P-R-T: 57° NA 56°

The ECG for Parvin H Titina shows mostly normal findings. The corrected QT interval (QTcB) is at the higher end of the normal range, requiring monitoring. No significant abnormalities were detected otherwise.

Patient ID: 1316262

Patient Name: Parvin H Titina

Age / Gender: 60/Female

Date: 6th Jan 25 10:40 AM

Summary of ECG Report

Based on the ECG report for Parvin H Titina, here are the key findings and what they might indicate:

Heart Rate (VR): 90 bpm

This is within the normal resting heart rate range for adults (60-100 bpm).

QRS Duration (QRSD): 100 ms

This is within the normal range (less than 120 ms), indicating normal ventricular depolarization.

QT Interval (QT): 364 ms

This is within the normal range for women (although the specific normal range can vary based on factors like age and heart rate). It indicates normal ventricular repolarization.

Corrected QT Interval (QTcB): 444 ms

This value is at the upper limit of the normal range. While still within the normal range, values closer to the upper limit warrant monitoring, as prolonged QT intervals can increase the risk of certain arrhythmias.

PR Interval (PRI): 148 ms

This is within the normal range (120-200 ms), indicating normal atrioventricular conduction.

P-R-T Angles: 57° NA 56°

These angles provide information about the electrical axis of the heart. The values here are within normal limits.

Summary:

The ECG for Parvin H Titina shows mostly normal findings. The corrected QT interval (QTcB) is at the higher end of the normal range, requiring monitoring. No significant abnormalities were detected otherwise.
